

Hello Mina.

Welcome to your personalized vitamins,
made just for your body.

Mendel's

Personalized Supplements

Mina, based on your DNA & Lifestyle Test results, we have formulated your supplements to focus on the most significant areas where the body needs help. Your daily pack contains the following micronutrients.

- Vitamin D 1000 IU
- Vitamin A 10,000 IU
- B Complex
 - Vitamin B2 50 mg
 - Vitamin B3 50 mg
 - Vitamin B6 50 mg
 - Vitamin B12 50 µg
 - Folate 400 µg

Your Results

DNA & Lifestyle Test Report for Mina

Vitamin A   SCORE **2** /10

Genetics

Significantly reduced function in Vitamin A converter.

Gene: BCO1 Your Genotype: A/T at rs12934922, C/T at rs7501331

Lifestyle

The body requires at least 900 µg to function. Insufficient due to amount of vegetables rich in vitamin A in your diet.

Vitamin C  SCORE **10** /10

Genetics

100% function in Vitamin C transporter.

Gene: SLC23A1 Your Genotype: C/C at rs33972313

Lifestyle

The body requires at least 90 mg to function. There are enough sources in your fruits and vegetables.

Supplement recommended

Genetics

Moderately reduced function in Vitamin D activator.

Gene: CYP2R1 and GC

Your Genotype: A/G at rs10741657, G/G at rs2282679

Lifestyle

The body requires at least 15 µg to function. Insufficient due to few sources in diet and gastrointestinal risk. Doctor recommended.

Genetics

Variant of gene associated with normal rate of vitamin B6 use and breakdown.

Gene: NBPF3 Your Genotype: T/T at rs4654748

Lifestyle

The body requires at least 1.3 mg to function. Severely insufficient due to the amount of vegetables and meats in diet, and risk from renal function.

Genetics

Moderately reduced function in gene involved in vitamin B12 absorption.

Gene: FUT2 Your Genotype: A/G at rs602662, A/G at rs492602

Lifestyle

The body requires at least 2.4 µg to function. Severely insufficient due to the amount of animal products and gastrointestinal risk. Doctor recommended.

For the following vitamins and essential minerals, there is currently not enough consensus scientific data of specific gene association. Your scores are based on the Lifestyle Test.

Lifestyle

The body requires at least 1.2 mg to function. Moderately sufficient despite lack of whole grains in diet.

Vitamin B2  
riboflavin SCORE **2** /10

Lifestyle

The body requires at least 1.3 mg to function. Insufficient based on the amount of animal products in diet.

Vitamin B3  
niacin SCORE **2** /10

Lifestyle

The body requires at least 16 mg to function. Insufficient based on the amount of animal products in diet.

Vitamin B5 
pantothenic acid SCORE **6** /10

Lifestyle

The body requires at least 5 mg to function. Moderately sufficient based on overall food consumption.

Choline 
SCORE **6** /10

Lifestyle

The body requires at least 550 mg to function. Moderately sufficient based on the amount of protein foods in diet.

Biotin 
vitamin B7 SCORE **6** /10

Lifestyle

The body requires at least 30 µg to function. Moderately sufficient based on the amount of animal products in diet.

Folate  
vitamin B9 SCORE **1** /10

Lifestyle

The body requires at least 400 µg to function. Severely insufficient based on the amount of vegetables and grains in diet, and gastrointestinal risk.

Vitamin E 
SCORE **3** /10

Lifestyle

The body requires at least 15 mg to function. Insufficient based on nuts and vegetable oils in diet. Gastrointestinal risk.

SCORE **6** /10

Lifestyle

The body requires at least 1 g to function. There are moderate amounts from dairy and juice in diet.

Potassium

SCORE 3 /10

Lifestyle

The body requires at least 3.4 g to function. Low overall consumption of balanced diet. Gastrointestinal risk.

Magnesium

SCORE 1 /10

Lifestyle

The body requires at least 420 mg to function. Severely insufficient based on the amount of whole grains and vegetables in diet. GI risk.

Iron

SCORE 5 /10

Lifestyle

The body requires at least 8 mg to function. Moderate overall food consumption. Gastrointestinal risk. Doctor recommended.

Zinc

SCORE 5 /10

Lifestyle

The body requires at least 11 mg to function. Moderate amounts of Zinc-rich animal and plant sources in diet.

This report is prepared by geneticists and nutritionists at Mendel's Peas using contemporary molecular genetics and nutrition databases published by government health authorities. A person with no genetic and health risk factors, who adheres to nutrition guides and healthy lifestyles, should score 10/10 for every vitamin and mineral. We have prepared your personalized supplements to address the most significant potential nutrition gaps found in this report.

Keep Improving

As you make improvements in your lifestyle and adjust your habits, your supplements will change with you. Keep us updated by retaking your Lifestyle Test, and we'll update your formulation to always fit your body.
